Agrell, C. et al., 2004. “Polybrominated diphenyl ethers (PBDES) at a solid waste incineration plant I: Atmospheric concentrations” Atmospheric Environment 38 (30): 5139-5148. Comparison of atmospheric concentrations of PBDES near a solid waste incinerator and an asphalt plant suggest that waste incineration is the major source of “old” PBDES in the environment.

DAVIS, Devra. 2002. When Smoke Ran Like Water: Tales of Environmental Deception and the Battle against Pollution. Basic Books. The author shows instances in which science has been manipulated for corporate gain and at the expense of citizens’ health.

Fischhoff, B. 1991. "Report from Poland: Science and Politics in the Midst of Environmental Disaster," *Environment* 33, no. 2:21. Decades of neglect and oppression created an environmental disaster in Eastern Europe. Although conditions have improved now, it’s important to understand what they were.

Jin Xu et al. 2002. “Measurement of aerosol chemical, physical and radiative properties in the Yangtze delta region of China” *Atmospheric Environment* 36 (2): 161-173. Air pollution is shown to have a significant impact on visibility, climate, crop production, and human health near Shanghai.

Retallack, Simon. 1997. “God Protect Us from Those Who ‘Protect the Skies’,” *The Ecologist* 27 (5): 188-191. The Montreal Protocol, initially hailed as a landmark in environmental protection, emerged as an agreement “as ridden with holes as the ozone layer it was designed to protect.”

Wu, Pei-Chih, et al., 2004. “Increased levels of ambient fungal spores in Taiwan are associated with dust events from China” *Atmospheric Environment* 38 (29): 4879-4886. Dust storms from China deposit live fungal spores in Taiwan.
